

COMMON

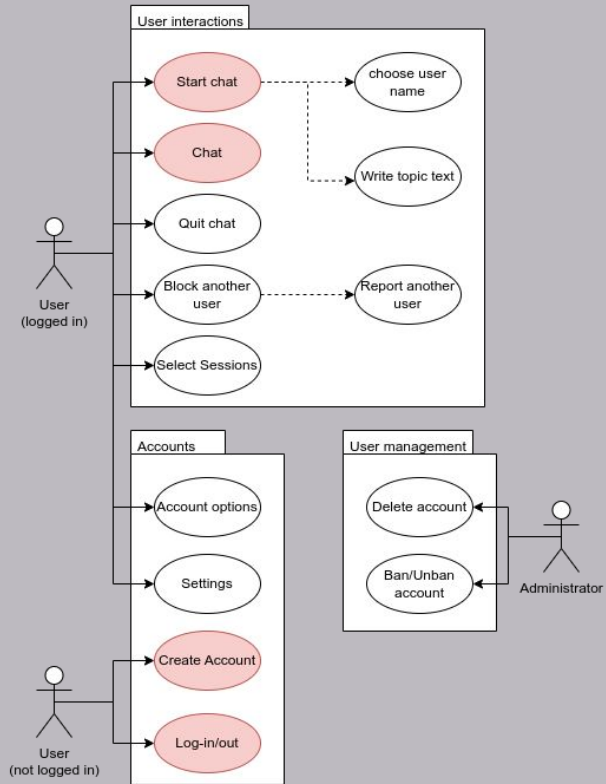

Erika Frank, Christian Misch, Lea Schablack,
Leon Schoch, Emina Yilmaz

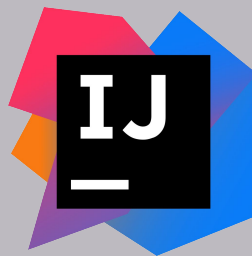

Project goal and vision

- reuniting people in times of isolation
- exchange of “common” topics
- user choose their preferred topic of conversation
- same interests are matched by a random system

Project goal and vision

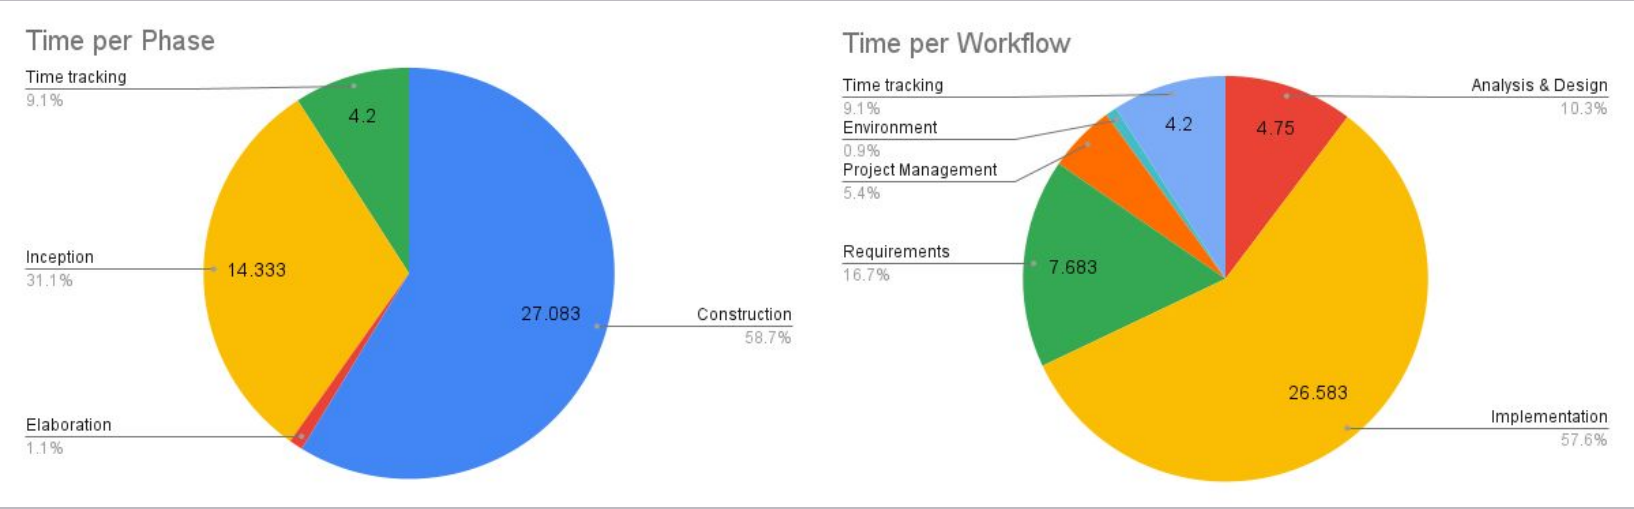

Software tools

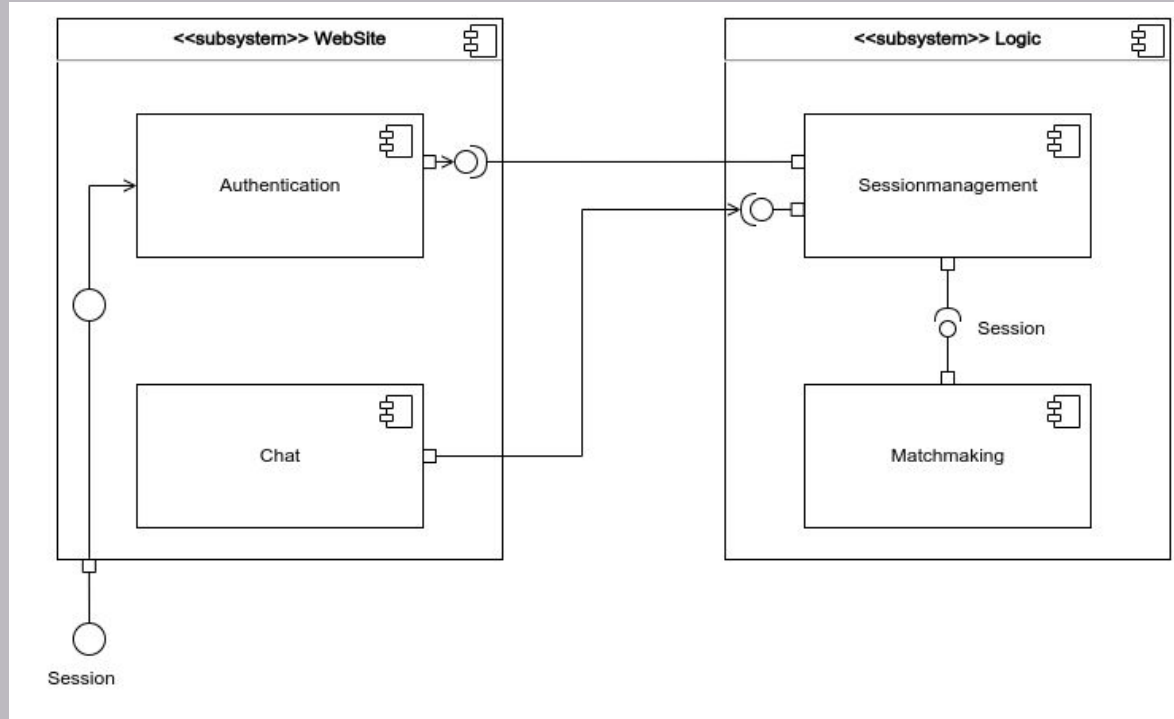

Organisation

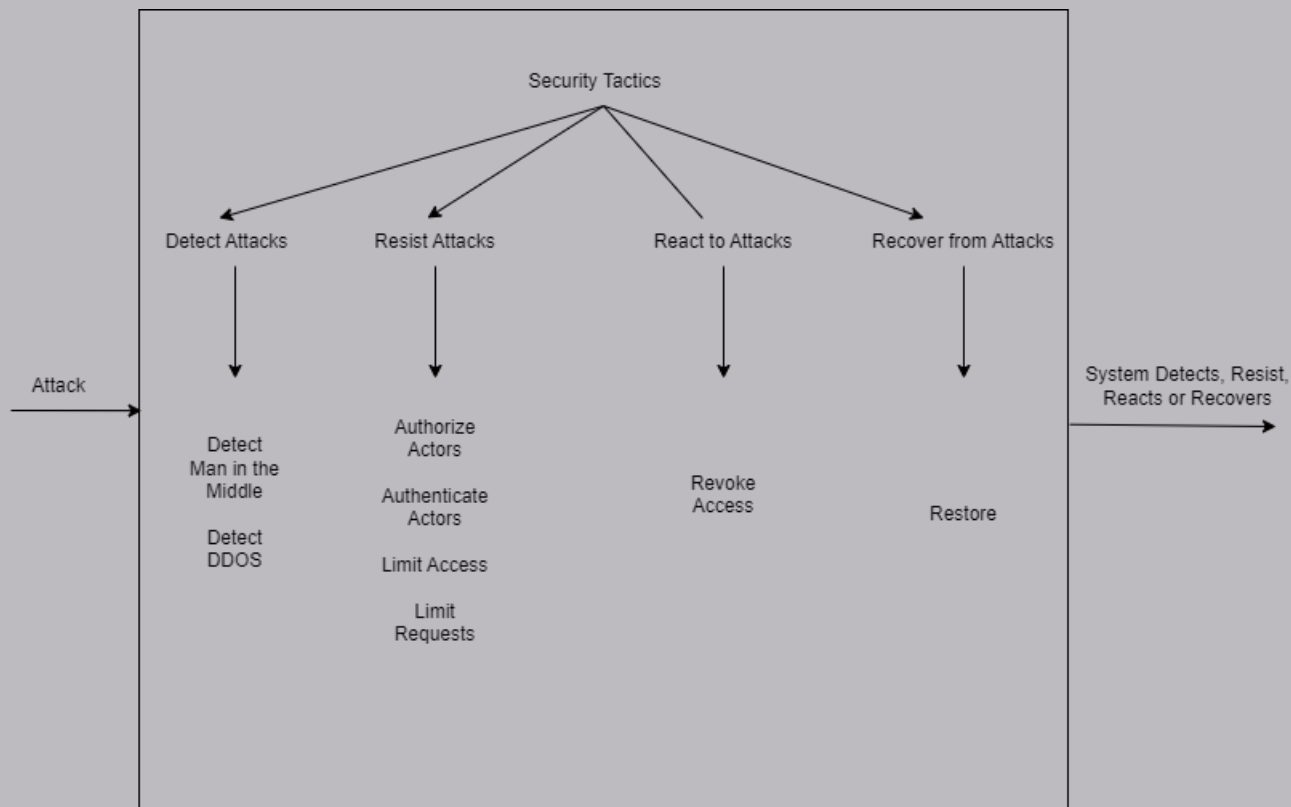

- Team: splits into two workgroups (frontend and backend)

Architecture decisions

Architecture decisions

Architecture decisions

- focus: security
- the sent messages should only be read by the sender and recipient
- backup of data is not intended; only personal data is saved
- website is not available
 - > leads to less use, less users and to worse matches
 - > miss the idea of the whole project

Applied design patterns

- KISS (Keep it simple stupid)

Live demo

Lessons learned

- Getting worklogs from Jira was a hassle. The solution was to export the issues as .csv and use excel to create the diagrams.
- Underestimation of organisation and project management.
- Make ticket tasks even more atomic/smaller
